

Short biography Filippo Cattalani

Born in Locarno (CH). Studied Biomedical Sciences in Fribourg and Bern.

Since 2021, enrolled in the GCB PhD program. My project focuses on the elucidation of the cellular receptor and the mechanism of action of the pore-forming toxin NetF produced by *C. perfringens*.

I am a big football fan (or rather a CR7 fan) and a lover of good food. I never miss the chance to go for a run after work in the beautiful woods near the institute.
